

# Fugro

**Website(s):** <https://www.fugro.com>  
**Market:** Geo-data specialist active in market segments: Oil & Gas, Infrastructure, Renewables, Nautical  
**Timeframe:** February 2020 - present  
**Summary:** Dynamic Power BI dashboards, Training, Process automation, Analytics, Consultancy  
**Review:** ★ ★ ★ ★ ★ (5/5)

## Project description:

SCData supported Fugro with the development of multiple Power BI dashboards which enabled users worldwide to easily access information and use this to drive cost optimization projects and increase cross-country collaboration. Procurement and Supply Chain employees across the world were trained in how they could use the dashboards in the most optimal way. The dashboards became part of their daily routine, which resulted in multiple upgrades to implement new functionality based on the provided feedback and increased demand for information. SCData initiated to automate the underlying processes reducing the necessity for SCData's support which is almost completed. This was realized thanks to a close collaboration between SCData and Fugro's IT departments and Wouter's ability to translate business needs into specific technical requirements and vice versa. Additionally, analytical support was provided to create presentations for the Global Supply Chain Management team and ELT. Next to this, advice was given for strategic long-term structural improvements to make further process optimizations possible. Finally, ad-hoc support is provided to answer specific questions from end-users and to assist IT with the implementation of additional functionality.
